

# Body Protection Systems

## Achieve a Perfect Texture Match

The 3M™ Rocker Protector Pouch is used with the 3M™ Accuspray™ HGP Spray Gun Kit to quickly deliver coatings onto any rigid textured panels on the vehicle. The precision delivery of these coatings allows product to be sprayed at any angle to match OEM textured finishes. Because the spray gun is so accurate, less masking is required and overspray is reduced, practically eliminating solvent use needed for clean up.

At participating distributors. For complete details, contact your 3M Distributor or 3M Sales Representative.

Remove the 3M™ Accuspray™ 2.0 mm Atomizing head and 3M™ Rocker Protector Pouch from the shipper and knead the pouch between your fingers to “break up” any solids that may have settled.

Insert the 3M™ Rocker Protector Pouch into the PPS™ H/O Pressure Cup, and attach the retaining collar, shake by hand or use a paint shaker.

Puncture the liner inside the PPS™ lid outlet using a pointed implement (a pencil works well for this).

Attach the atomizing head to the pressurized Spray gun, attach the cup assembly to the atomizing head and attach the pressure cup air feed tube to the gun body pressure side port.

After use, remove the cup assembly and atomizing head and wipe away any residue on the needle valve.

Dispose of the empty pouch in a proper waste receptacle, or if product is left over, cap the pouch with a PPS™ cap for future use.
