3. HAZARD IDENTIFICATION

Note: Data has not been established for this product. Data is listed for MDI.

**ROUTES OF ENTRY:**

**INHALATION:** Yes. Although MDI is low in volatility, an inhalation hazard can exist from MDI aerosols or vapors formed during heating, foaming, spraying, or otherwise aerosolizing the material in an inadequately ventilated environment.

**SKIN CONTACT:** Yes.

**EYE CONTACT:** Yes.

**INGESTION:** Yes.

**ACUTE HEALTH HAZARDS:**

**INHALATION:** MDI vapors or mist at concentrations above TLV can irritate (burning sensation) the mucous membranes in the respiratory tract (nose, throat, lungs) causing runny nose, sore throat, coughing, chest discomfort, shortness of breath and reduced lung function (breathing obstruction). Persons with a preexisting, nonspecific bronchial hyper reactivity can respond to concentrations below the TLV with similar symptoms as well as asthma attack. Exposure well above the TLV may lead to bronchitis, bronchial spasm and pulmonary edema (fluid in lungs). These effects are usually reversible. Chemical or hypersensitive pneumonitis, with flu-like symptoms (e.g., fever, chills) has also been reported. These symptoms can be delayed up to several hours after exposure.

**SKIN:** Isocyanates react with skin protein and moisture and can cause irritation, which may include the following symptoms: reddening, swelling, rash, scaling, or blistering. Cured material is difficult to remove. Hot material can cause thermal burns.

**EYE:** Liquid, aerosols or vapors are irritating and can cause tearing, reddening, and swelling. If left untreated, corneal damage can occur and injury is slow to heal. However, damage is usually reversible.

**INGESTION:** Can result in irritation and corrosive action in the mouth, stomach tissue, and digestive tract. Symptoms can include sore throat, abdominal pain, nausea, vomiting, and diarrhea.

**CHRONIC HEALTH HAZARDS:**

**INHALATION:** As a result of previous repeated overexposures or a single large dose, certain individuals develop isocyanate sensitization (chemical asthma), which will cause them to react to a later exposure to isocyanate at levels well below the TLV. These symptoms; which can include chest tightness, wheezing, cough, shortness of breath or asthma attack, could be immediate or delayed (up to several hours after exposure). Similar to many non-specific asthmatic responses, there are reports that once sensitized; an individual can experience these symptoms upon exposure to dust, cold air or other irritants. This increased lung sensitivity can persist for weeks and in severe cases for several years. Overexposure to isocyanates has also been reported to cause lung damage (including decrease in lung function), which may be permanent. Sensitization can either be temporary or permanent.

**SKIN:** Prolonged contact can cause reddening, swelling, rash, scaling, blistering, and in some cases, skin sensitization. Individuals who have skin sensitization can develop these symptoms from contact with liquid or vapors. Animal tests have indicated that respiratory sensitization can result from skin contact with MDI. This data reinforces the need to prevent direct skin contact with MDI.
**EYE:** None : Found.

**INGESTION:** None Found.

**CARCINOGENICITY:** Neither MDI nor polymeric MDI are listed by the NTP, IARC, or regulated by OSHA as carcinogens.  
NTP (National Toxicology Program): No.  
OSHA REGULATED: No.

**MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE:** Asthma, other respiratory disorders (bronchitis, emphysema, bronchial hyper reactivity), skin allergies, eczema.

---

**4. FIRST AID MEASURES**

**INHALATION:** Move to an area free from risk of further exposure. Administer oxygen or artificial respiration as needed. Obtain medical attention. Asthmatic-type symptoms may develop and may be immediate or delayed up to several hours. Consult physician should this occur.

**SKIN:** Remove contaminated clothing. Wash affected skin thoroughly with soap and water. Wash contaminated clothing thoroughly before reuse. For severe exposures, get under safety shower after removing clothing, then get medical attention. For lesser exposures, seek medical attention if irritation develops or persists after the area is washed.

**EYE:** Flush with copious amount of water, preferably, lukewarm water for at least 15 minutes, holding eyelids open all the time to ensure that the eyes are being irrigated. Refer individual to physician or ophthalmologist for immediate follow-up.

**INGESTION:** DO NOT INDUCE VOMITING. Wash mouth out with water. DO NOT GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON. Consult physician.

**NOTE TO PHYSICIAN:**

**INHALATION / RESPIRATORY:** This compound is a known pulmonary sensitizer. Treatment is essentially symptomatic. An individual having a pulmonary sensitization reaction to this material should be removed from exposure to any isocyanate.

**SKIN:** This compound is a known skin sensitizer. Treat symptomatically as for contact dermatitis or thermal burns. If burned, treat as thermal burn. An individual having a skin sensitization reaction to this material should be removed from exposure to any isocyanate.

**EYE:** Stain for evidence for corneal injury. If cornea is burned, instill antibiotic steroid preparation frequently. Workplace vapors have produced reversible corneal epithelial edema impairing vision.

**INGESTION:** Treat symptomatically. MDI has a very low oral toxicity. There is no specific antidote. Inducing vomiting is contraindicated because of the irritating nature of this compound.

---

**5. FIRE FIGHTING MEASURES**

**FLASH POINT (Method Used):** 390º F (198.9º C) Pensky-Martens Closed Cup (for MDI)

**FLAMMABLE LIMITS:**

- LEL (Lower Explosion Limit) = Not Available.
- UEL (Upper Explosion Limit) = Not Available.

**EXTINGUISHING MEDIA:** Carbon dioxide (CO2), dry chemical or foam. Water spray for large fires. The reaction between water and hot product may be vigorous.

**SPECIAL FIRE FIGHTING PROCEDURES:** Full emergency equipment with self-contained breathing apparatus and full protective clothing should be worn by firefighters.

**UNUSUAL FIRE & EXPLOSION HAZARDS:** During a fire, MDI vapors and other irritating, highly toxic gases may be generated by thermal decomposition or combustion. (See Section: Stability & Reactivity Data). At temperatures greater than 400º F (204ºC), polymeric MDI can polymerize and decompose which can cause pressure build-up in closed containers. Explosive rupture is possible. Therefore, use cold water to cool fire-exposed containers.

---

**6. ACCIDENTAL RELEASE MEASURES**

**STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED:**

- Identify the material.
- Evacuate “immediate” spill area and keep nonessential or unprotected personnel away.
- Remove any ignition sources.
- Ventilate spill area.
- Equip clean-up personnel with full protective equipment (recommend eye & face protection, permeation-resistant gloves, permeation-resistant suit, permeation-resistant boots, & respirator.)
- Control the source by stopping the spill, leak, or other flow of product.
- Contain or dike the spilled product, creating a barrier around the spill and the inlet to any sewers or drains.
- Prevent spilled material from entering soil, sewers, surface water, ground water, streams, or any other bodies of water.
- If temporary control of isocyanate vapor is required, a blanket of protein foam (available at most fire departments) may be placed over the spill.
- Retain any contaminated water for removal and treatment.
- Absorb small spills with inert absorbent material (e.g. vermiculite, saw dust, clay earth, sweeping compound, sand, etc.).
• Large spills may be pumped or vacuumed into a closed, but not sealed container for disposal and then finished off with dry absorbent, followed by neutralizing solution.
• Apply neutralizing solution (see below) over spill area & absorbent.
• Scoop up absorbed material and remaining absorbent/decontaminant mixture and place in a metal drum or other approved chemical waste container (a closed, but not sealed container).
• Transport container to well-ventilated area (outside, etc.)
• Apply neutralizing solution to the absorbed material in the waste container to ensure adequate decontamination. Lid should remain loose but not sealed or tightened as dangerous pressures may result from the neutralization process.
• Monitor the drum frequently for the next 48–72 hours in case over pressurization results from continued reaction and while carbon dioxide escapes.
• Decontaminate receiving surface (floor, etc.) with neutralizing solution and let it stand for at least 15 minutes.
• Decontaminate tools & protective equipment.
• Remove protective equipment.
• Properly dispose of isocyanate contaminated materials & equipment that cannot be decontaminated. (Incineration is the preferred method.)
• NOTE: Acceptable neutralizing solutions (ie. decontamination solutions) are:
  80% water + 20% non-ionic surfactant such as Dow/Union Carbide Tergitol TMN-10 (or other non-ionic surfactant which is liquid & mixes well with water) OR 90% water + 3-8% concentrated ammonia + 2-7% detergent.
• Recommended ratio for thorough decontamination is 1 part of spilled material to 10 parts of neutralizing solution.
• Report spill per regulatory requirements.

7. HANDLING & STORAGE

7. HANDLING & STOREAGE

PRECAUTIONS TO BE TAKEN IN HANDLING & STORING: Store in tightly closed containers to prevent moisture contamination. Do not reseal if contamination is suspected. Avoid contact with skin and eyes. Do not breathe aerosols or vapors. Warning properties (irritation of the eyes, nose and throat or odor) are not adequate to prevent chronic overexposure from inhalation. This material can produce asthmatic sensitization upon either single inhalation exposure to a relatively high concentration or upon repeated inhalation exposure to lower concentrations. Exposure to vapors of heated MDI can be extremely dangerous. Employee education and training in the safe use and handling of this compound are required under the OSHA Hazard Communication Standard.

SPECIAL SENSITIVITY (HEAT, LIGHT, MOISTURE): If container is exposed to high heat, 400°F (204°C) it can be pressurized and possibly rupture. MDI reacts slowly with water to form CO2 gas. This gas can cause sealed containers to expand and possibly rupture.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

VENTILATION: Local exhaust should be used to maintain levels below the TLV whenever MDI or MDI-containing products are heated, sprayed, aerosolized, or processed. Standard reference sources regarding industrial ventilation (ie., ACGIH Industrial Ventilation) should be consulted for guidance about adequate ventilation.

RESPIRATORY PROTECTION: Airborne MDI concentrations greater than the ACGIH TLV-TWA (TLV) or OSHA PEL-C (PEL) can occur in inadequately ventilated environments when MDI or MDI-containing products are sprayed, aerosolized, or heated. In such cases, respiratory protection must be worn. The type of respiratory protection selected must comply with the requirements set forth in OSHA’s Respiratory Protection Standard (29 CFR 1910.134). The type of respiratory protection available includes:

(1) an atmosphere-supplying respirator such as a self-contained breathing apparatus (SCBA) or a supplied-air respirator (SAR) in the positive pressure or continuous flow mode, or
(2) an air-purifying respirator (APR). The recommended APR cartridge is an organic vapor/HEPA combination cartridge (OV/P100). If an APR is selected, the following conditions must be met: (a.1) the cartridge must be equipped with an end-of-service-life indicator (ESLI) certified by NIOSH, OR (a.2) a change out schedule, based on objective information or data that will ensure that the cartridges are changed out before the end of their service life, must be developed and implemented. The basis for change out schedule must be described in the written respirator program, AND (b) the airborne MDI concentration must be no greater than 10 times the TLV or PEL.

SKIN PROTECTION: Permeation resistant gloves (butyl rubber, nitrile rubber, polyvinyl alcohol). However, please note that PVA degrades in water. Cover as much of the exposed skin area as possible with appropriate clothing. If skin creams are used, keep the area covered by the cream to a minimum.

EYE PROTECTION: Chemical goggles should be used in a splash hazard environment. For additional protection, chemical goggles should be used in combination with a full face shield. Contact lenses should not be worn when working with chemicals.

MEDICAL SURVEILLANCE: Medical supervision of all employees who handle or come in contact with isocyanates is recommended. History of adult asthma, respiratory allergies (such as hay fever), eczema, history of prior isocyanate sensitization, or lack of smell (anosmia) are possible reasons for medical exclusion from isocyanate areas. Once a person is accurately diagnosed as sensitized to an isocyanate, no further exposure can be permitted.

OTHER PROTECTIVE CLOTHING OR EQUIPMENT: Safety showers and eyewash stations should be available.
WORK/HYGIENIC PRACTICES: Wash hands, forearms, and face thoroughly after handling compounds and before eating, smoking, using lavatory, and at the end of the day. Educate and train employees in safe use of product. Follow all label instructions.

9. PHYSICAL / CHEMICAL PROPERTIES
APPEARANCE (physical form, color, texture, etc.) Light yellow Liquid
ODOR: Slightly musty odor.
MELTING POINT: 90° F (37° C) for MDI; Not Established for product.
FREEZE POINT: Not Established.
BOILING POINT: 97° F (313.9° C) for MDI; Not Established for product.
VAPOR PRESSURE (mm Hg): Less than 10-5 mm Hg @ 77° F (25° C) for MDI; Not Established for product.
VAPOR DENSITY (Air = 1): 8.5 for MDI; Not Established for product.
SPECIFIC GRAVITY (H2O = 1): 1.144 @ 77° F (25° C).
VISCOSITY@25°C: 840 CPS
EVAPORATION RATE (Butyl Acetate = 1): Not Established.
SOLUBILITY IN WATER: Reacts slowly with water to liberate CO2 gas for MDI; not established for product.
BULK DENSITY: 9.49 lbs/gal for MDI; not established for product.
% VOLATILE BY VOLUME: Negligible.

10. STABILITY & REACTIVITY
STABILITY: Stable under normal conditions.
CONDITIONS TO AVOID (If unstable): Contamination with water.
INCOMPATIBILITY (MATERIALS TO AVOID): Water, amines, strong bases, alcohols. Will cause some corrosion to copper alloys and aluminum.
HAZARDOUS DECOMPOSITION OR BYPRODUCTS: By high heat and fire: carbon monoxide (CO), oxides of nitrogen, traces of HCN, MDI vapors or aerosols.
HAZARDOUS POLYMERIZATION: May occur.
CONDITIONS TO AVOID (if polymerization may occur): Contact with moisture, other materials which react with isocyanates, or temperatures above 400º F (204º C).

11. TOXICOLOGICAL INFORMATION
Toxicity data based on polymeric MDI.
ORAL: Acute Toxicity LD50:>2,000 mg/kg (rat, male/ female)
INHALATION: Acute toxicity LC50: 490mg/m3, vapor, 4h (rat)
SKIN: The LD50 for skin absorption in rabbits is >10,000 mg/kg
INGESTION: The oral LD50 for rats is >10,000 mg/kg
REPEATED DOSE TOXICITY: 90 Days, inhalation: NOAEL: 1 mg/m3, (rat, male/female, 6hrs/day 5 days/week.) Results: Irritation to lungs and nasal cavity.
2 Years, inhalation: NOEAL: 0.2mg/m3, (rat, male/female, 6hrs/day 5 day/week) Results: Irritation to lungs and nasal cavity.
MUTAGENICITY (EFFECTS ON GENETIC MATERIAL): Genetic toxicity data on MDI are inconclusive. MDI was weakly positive in some in-vitro studies; other in-vitro studies were negative. Animal genetic toxicity studies were predominantly negative.

4,4-Diphenylmethane Diisocyanate (MDI)

Acute Inhalation Toxicity
LC50: 369 mg/m3, 4 hrs (rat, male/female)
LC50: >2240 mg/m3, aerosol, 1 hr (rat).
Acute Dermal Toxicity
LD50: >10,000 mg/kg (rabbit)
Skin Irritation
Rabbit, Draize test, slightly irritation
Sensitization
Dermal: sensitizer (guinea pig, Maximization Test (GPMT))
Inhalation: sensitizer (guinea pig)
Repeated Dose Toxicity
90 days, inhalation: NOAEL: 0.3 mg/m3, (rat, male/female, 18 hrs/day, 5 days/week) Irritation to lungs and nasal cavity.

Mutagenicity
Genetic Toxicity in Vitro:
Ames: (salmonella typhimurium, Metabolic Activation: with/without) Positive and negative results were reported. The use of certain solvents which rapidly hydrolyze diisocyanates is suspected of producing the positive mutagenicity results.
Genetic Toxicity in Vivo:
Micronucleus Assay: negative (mouse)

Carcinogenicity
Rat, female, inhalation, 2 years, 17hrs/day, 5 days/week
Results: negative

12. ECOLOGICAL INFORMATION

Ecotoxicity data based on polymeric MDI

Bioaccumulation
Revision Date: 10-26-07 MSDS
Product: IS-181215A Page 6 of 7
Rainbow trout, exposure time: 112d, <1BCF
Does not bio accumulate.
Acute and Prolonged Toxicity to Fish
LC0: >1,000 mg/l (Zebra fish (Brachydanio rerio), 96 hrs)
LC0 : > 3,000 mg/l (Killifish (oryzias latipes), 96 h)
Acute Toxicity to Aquatic Invertebrates
EC50: >1,000 mg/l (water flea (Daphnia magna), 24 hrs)
Toxicity to Aquatic Plants
NOEC: 1,640mg/l, End Pint: growth (Green algae (Scenedesmus subspicatus), 72 hrs)
Toxicity to Microorganisms
EC50:>100mg/l, (Activated sludge microorganisms, 3 hrs)

Ecological Data for 4,4’-Diphenylmethane Diisocyanate (MDI)

Acute and Prolonged Toxicity to fish
LC50: >500mg/l )Zebra fish (Brachydanio rerio), 24 hrs)
Acute Toxicity to Aquatic Invertebrates
EC50: >500mg/l (Water flea (Daphnia magna), 24 hrs)

13. DISPOSAL CONSIDERATIONS

WASTE DISPOSAL METHOD: Waste must be disposed of in accordance with federal, state, and local environmental control regulations. Incineration is the preferred method.

EMPTY CONTAINER PRECAUTIONS: Empty containers must be handled with care due to product residue. Decontaminate containers prior to disposal. Acceptable neutralizing solutions (ie. decontamination solutions) are: 80% water + 20% non-ionic surfactant such as Dow/Union Carbide Tergitol TMN-10 (or other non-ionic surfactant which is liquid & mixes well with water) OR 90% water + 3-8% concentrated ammonia + 2-7% detergent.
Empty decontaminated containers should be crushed to prevent reuse. Do not heat or cut empty container with electric or gas torch. (See Sections 5-Fire & Explosion Hazard Data and Section 10-Stability and Reactivity). Vapors and gases may be highly toxic.

14. TRANSPORTATION INFORMATION

Land transport (DOT)

Proper shipping name: Other regulated substances, liquid, n.o.s (containing 4,4’-Diphenylmethane Diisocyanate (MDI))
Proper class or division: Other regulated substances, Liquid N.O.S. *See note below.
Hazard Class or Division: 9
UN/NA Number: UN 3082
Package Group: III
Hazard Label(s): Class 9
DOT Product RQ lbs (Kgs): 20,000 lbs (9072.0 kgs)

RSPA/DOT Regulated Components:
4,4’-Diphenylmethylane Diisocyanate (MDI)

Sea transport (IMDG)

Proper shipping name: “ NOT REGULATED ”
Hazard Class or Division

Hazard Label(s)

*Additional Transportation Information:
When in individual containers of less than the Product RQ, this material ships as non-regulated.

15. REGULATORY INFORMATION

OSHA HAZARD COMMUNICATION STATUS: This product is considered hazardous as defined under the criteria of the Federal OSHA Hazard Communication Standard 29 CFR 1910.1200.

RCRA STATUS: MDI is not listed as a hazardous waste. To the best of our knowledge, MDI does not meet the criteria of a hazardous waste if discarded in its purchased form. However, under RCRA, it is the responsibility of the user of products to determine, at the time of disposal, whether a product meets any of the criteria for a hazardous waste. This is because product uses, transformations, mixtures, processes, etc., may render the resulting material hazardous, under the criteria of ignitability, corrosivity, reactivity, and EP toxicity (40 CFR 261.20-24).

This information is furnished without warranty, expressed or implied, except that it is accurate to the best knowledge of ARTLUX S.A. The data on this sheet relates only to the specific material designated herein. ARTLUX S.A. assumes no legal responsibility for use or reliance upon these data.
1. PRODUCT IDENTIFICATION

PRODUCT NAME: TOFF CS SIDE B
CHEMICAL FAMILY: Polyol Blend

2. HAZARDS IDENTIFICATION

MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE: None known.

ROUTES OF ENTRY:
- Skin
- Eye
- Ingestion.
- Inhalation.

ACUTE HEALTH HAZARDS:
- INHALATION- Not expected to be a hazard due to low vapor pressure. Overexposure may lead to respiratory irritation.
- SKIN- May cause slight irritation.
- EYE- May cause slight irritation.
- INGESTION- May cause gastric disturbances.

CHRONIC HEALTH HAZARDS:
None known.

CARCINOGENICITY:
- NTP (National Toxicology Program)? No.
- IARC (International Agency for Research on Cancer)? No
- OSHA REGULATED? No.

3. COMPOSITION / INFORMATION ON INGREDIENTS

INGREDIENT NAME CAS NUMBER % OSHA PEL ACGIH TLV
This product contains no hazardous ingredients as defined under the criteria of the Federal OSHA Hazard Communication Standard 29CFR 1910.1200.

4. FIRST AID MEASURES

INHALATION- Remove to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, administer oxygen (qualified medical personnel only). See medical attention immediately.

SKIN- Remove all contaminated clothing and shoes. Wash skin thoroughly with soap and water for at least 15 minutes. Wash clothing before wearing again. Clean shoes before wearing again. If irritation develops or persists, consult a physician.

EYE- Flush with large amounts of water for at least 15 minutes, using fingers to hold eyelids open to insure that the eyes are being irrigated. Consult a physician if ill effects or irritation occurs.

INGESTION- Give two glasses of water for dilution. Never give anything by mouth to an unconscious person. Induce vomiting. Get medical attention immediately.

5. FIRE FIGHTING MEASURES

FLASH POINT (Method Used): Aprox. 220°C
FLAMMABLE LIMITS:
- LEL (Lower Explosion Limit)= Not established.
- UEL (Upper Explosion Limit)= Not established.

EXTINGUISHING MEDIA: Foam, carbon dioxide, dry chemical, water spray or water fog.

SPECIAL FIRE FIGHTING PROCEDURES: Evacuate area. Fight fire from a safe distance. Fire-fighters should wear full emergency equipment with self-contained breathing apparatus and full protective clothing. Use cold water spray to cool fire-exposed containers to minimize risk of rupture.

UNUSUAL FIRE & EXPLOSION HAZARDS: Elevated temperatures can cause decomposition.
6. ACCIDENTAL RELEASE MEASURES  
**STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED:**

- Stop the spill or leak.
- Contain or dike the spilled product.
- Evacuate spill area and keep nonessential or unprotected personnel away.
- Equip clean-up personnel with necessary personal protective equipment (see Section VIII-Control Measures).
- Prevent spilled material from entering soil, sewers, surface water, ground water, streams, or any other bodies of water.
- Retain any contaminated water for removal and treatment.
- Absorb small spills with inert material (e.g. dry sand, earth, chemical absorbent, etc.).
- Scoop up absorbed material and absorbent and place in an approved chemical waste container.
- Large spills may be taken up with pump or vacuum & then finished off with dry absorbent.
- Report spill per regulatory requirements.

7. HANDLING AND STORAGE  
**PRECAUTIONS TO BE TAKEN IN HANDLING & STORING:** Store in cool dry area. Keep container closed to maintain product quality.  
**OTHER PRECAUTIONS:** None.

8. EXPOSURE CONTROLS/ PERSONAL PROTECTION  
**VENTILATION:** Good general ventilation. Ventilation should be matched to conditions. Use local exhaust to control vapors/mists.  
**RESPIRATORY PROTECTION:** Approved organic vapor mist respirator as necessary.  
**SKIN PROTECTION:** Gloves, coveralls, apron, boot as necessary to prevent skin contact.  
**EYE PROTECTION:** Chemical goggles; also wear a face shield if a splashing hazard exists.  
**OTHER PROTECTIVE CLOTHING OR EQUIPMENT:** Safety showers and eyewash stations should be readily available and in working condition.  
**WORK/HYGIENIC PRACTICES:** Wash hands, forearms, and face thoroughly after handling product and before eating, smoking, using lavatory, and at the end of the day. Educate and train employees in safe use of product. Follow all label instructions.

9. PHYSICAL AND CHEMICAL PROPERTIES

**APPEARANCE** (physical form, color, texture, etc.) Black pigmented liquid

**ODOR:** Slight

**MELTING POINT:** Not Established.

**BOILING POINT:** Not Established.

**VAPOR PRESSURE (mm Hg):** Not Established.

**VAPOR DENSITY** (Air = 1) Not Established.

**SPECIFIC GRAVITY** (H₂O = 1): 0.977 gr/cc

**VISCOSITY@25°C:** 840 CPS

**EVAPORATION RATE** (Butyl Acetate = 1): Not Established.

10. STABILITY AND REACTIVITY

**STABILITY:** Stable.

**CONDITIONS TO AVOID** (if unstable): Avoid contact with heat, spark, flames or incompatible materials.

**INCOMPATIBILITY** (MATERIALS TO AVOID): Strong oxidizing agents

**HAZARDOUS DECOMPOSITION OR BYPRODUCTS:** CO and CO₂.

**HAZARDOUS POLYMERIZATION:** Will not occur.

**CONDITIONS TO AVOID** (if polymerization may occur): Not Applicable.

11. TOXICOLOGICAL INFORMATION

Not established for Product

12. ECOLOGICAL INFORMATION

Not established for Product

13. DISPOSAL CONSIDERATIONS

**WASTE DISPOSAL METHOD:** Dispose of in accordance with applicable federal, state, and local regulations.

**EMPTY CONTAINER PRECAUTIONS:** Empty containers retain product residue (liquid and/or vapor) and can be hazardous. Do not pressurize, cut, weld, braze, solder, drill, grind or expose such containers to heat, flame, sparks, static electricity, or other sources of ignition. All containers should be disposed of in an environmentally safe manner and in accordance with applicable federal, state, and local regulations.
