ADVANCING POLYMER REPAIR

Nitro Fuzer Nitrogen Welder System

The Nitro Fuzer welder combines hot air and nitrogen welding capabilities for maximum versatility. The 6085-C welder features digital encoders to precisely control the temperature of the nitrogen and airless welders. It also automatically switches from air to nitrogen when the torch is removed from the holster and automatically switches back to air when the torch is placed back into the holster. Precision regulators combined with a flow gauge gives you the ultimate control over how much gas is used in the welding process. The 6085-C Nitro Fuzer also features an integrated airless welding system for smoothing out welds and for repairing thermoset polyurethane.

Benefits:

- Make stronger repairs than with any other method.
- Profit from repairing plastic rather than replacing it.
- Make more profit by welding rather than using two-part adhesives.
- Repair tabs, mounting holes, and slots that are impossible to repair with two-part adhesives.
